

Secure Document Library Solution

Project Summary:

Dataspective implemented, supports, and maintains for Cornerstone Research a secure document portal for managing documents related to legal cases.

The documents are stored on a secure server and they are accessed via SSL using 128 bit encryption.

The solution was implemented using Microsoft IIS, Active Server Pages, and custom developed COM components.

Managed credentials are required to access documents on the portal and security is proactively monitored to maintain the integrity of the system.

This solution serves several hundred users from over 40 law firms that are clients of Cornerstone Research.

Dataspective has supported and maintained this site for more than seven (7) years. Dataspective provides 24 x 7 customer service and technical support for this solution.

The solution has been a tremendous success for Cornerstone Research and has added revenue to its bottom line; while also providing a unique and valuable service to its customers.
